PROJECTS

Healthcare Platform (HCPs - Content, Webinars, Surveys, Educational Resources)

Developed an integrated platform tailored for healthcare professionals (HCPs) to engage with content, webinars, surveys, and educational resources. Below are the key modules and functionalities:

- **Content Engagement Tracking (Analytics)**
 - Tracked metrics such as openings, unique readers, downloads, and Read Through Rate (RTR).
 - Identified top-performing content based on views and engagement.
 - Provided regional and demographic insights like country registrations and regional performance.
- **Webinar & Event Hosting**
 - Enabled live event streaming, tracked user presence, and enhanced engagement with polls, questions, and audience tracking.
 - Integrated with Zoom and Webex for secure meeting hosting and attendee management.
 - Allowed event registration, customized forms, and automated email communication for promotions.
 - Provided analytics on registration, attendance, and post-event feedback.
- **Survey Management & Feedback Collection**
 - Developed dynamic survey creation with templates, multiple question types, and QR code sharing.
 - Monitored real-time analytics on completion rates, participant status, and question-specific data.
 - Facilitated survey distribution and in-depth reporting for engagement analysis.
- **Content & Educational Resources**
 - Curated and delivered medical content, expert opinions, and event-specific resources.
 - Engaged HCPs with expert insights, videos, and real-time feedback through interactive polling.

- Managed a resource library with medical content, articles, and PDFs, offering advanced search and recommendations.
 - **Admin & Backend Modules**
 - Developed user management and CRM modules to track HCP activity, manage interactions, and provide targeted content engagement.
 - Designed event scheduling and management tools for organizing dates, registration, and materials.
 - Implemented detailed reporting for content performance, HCP engagement, and event metrics.
 - **Data & Metadata Storage**
 - Used MySQL for structured event and user data storage and MongoDB for activity data, ensuring efficient data management.
-
